

ALUMINIO EN-AW 6060

The EN AW 6060 aluminum alloy is widely used due to its high thermal deformation capacity, extrusion speed and the possibility of obtaining an excellent level of aesthetic finish, especially through the anodization process. It also has an excellent corrosion resistance, excellent weldability and good cold formability, all aspects that make it the ideal material for the creation of complex shapes and design objects.

Alloy	Forms	Characteristics - Properties	Applications
EN - AW 6060	• Extruded round rod/bar	<ul style="list-style-type: none"> Very good corrosion resistance Medium strength Complex sections Anodising quality 	Architectural sections, frames, lightings, railing, ladders, furniture, fences, flooring

Alloy	Temper	Temper designation (EN 515)
EN - AW 6060	O	Annealed wrought alloys
	T4	Solution heat treated & natural aged
	T5	Cooled from an elevated temperature forming operation & artificially aged (precipitation hardened)
	T6	Solution heat treated & artificially aged (precipitation hardened) Press quenching required
	T64	Solution heat treated & artificially aged (precipitation hardened) Under aged to improve formability (bending temper)
	T66	Cooled from an elevated temperature forming operation & artificially aged (precipitation hardened) to a higher level of mechanical properties through special control of manufacturing processes. Press quenching required.

Aluminium & aluminium alloys Extruded rod/bar, tubes and precision profiles
EN 755-1 Technical conditions for inspection & delivery
EN 755-2 Mechanical properties
EN 755-3 Round bars, tolerances on dimension & form
EN 755-4 Square bars, tolerances on dimension & form
EN 755-5 Rectangular bars, tolerances on dimension & form
EN 755-6 Hexagonal bars, tolerances on dimension & form
EN 755-7 Seamless tubes, tolerances on dimension & form
EN 755-9 Profiles, tolerances on dimension & form
EN- 12020-1 Technical conditions for inspection & delivery (precision profiles)
EN- 12020-2 Tolerances on dimension & form (precision profiles)
