

**ECONYL®**

# Responsible Design for People + Planet

Inclusive design considers the full range of human diversity with respect to ability, language, culture, gender, age and other forms of human difference. It also considers the neurodiversity of people, creating spaces that are thoughtful about sensory sensitivities and adaptable to different preferences. Sustainable design considers the living world, and since humans are part of the living world, one cannot exist without the other.

When brought together as one philosophy, designing for sustainability and inclusivity is responsible design. We must reimagine our designs to be functional, inclusive and constructed for easy disassembly and recycling at the end of life.

Introducing the TOCCO Collection by pba, an inclusive hardware collection made with ECONYL® nylon designed to address sensory sensitivities. Made to be easily disassembled and 100% recycled, the collection offers multiple options for visual stimulation and way finding - including a wide choice of colors - two tactile options - smooth or faceted grip - and a comfortable thermal sensation resulting from the softness of the grip and the ambient room temperature.

made with ECONYL® nylon*

“When we design spaces, we must think about the way people perceive and interact with the environment. **We must also think about how the things we create can impact the planet, from how materials are sourced, to where they end up at the end of their service life.**”

— Erica Anesi, *CEO of pba*

Aquafil and pba invite you to experience the TOCCO Collection at NeoCon 2024 in the **ECONYL® by Aquafil showroom, 11-107.**
